Syllabus: FA26 CSCI 4150 – Theory of Computation and Compilers

Gordon and Jill Bourns College of Engineering Mission Statement and Verse

"Preparing engineering students of excellence and character, with a Christian worldview, who are called to serve, equipped to lead and sent to engage the world with their lives and the appropriate use of technology."

"… For we are God's workmanship, created in Christ Jesus to do good works, which God has prepared in advance for us to do." *Ephesians 2:10*

Introduction to concepts and considerations of modern compilers and programming languages. Language translation, types and declaration, and abstraction mechanisms are studied. Both functional and object-oriented programming paradigms are explored through examination of several programming languages. Automata, languages and grammar, language processing, computability and complexity theory will be examined in detail. Important topics will be explored using a combination of conceptual work and coding exercises.

Pre-requisites (Required)

1. EGR 221
2. EGR 225

Co-requisites

None

Mandatory Text and Resources

Textbook:

1. Automata and Computability, Dexter C. Kozen, Springer, 1997, ISBN 978-0-387-94907-9.
2. Fischer, Cytron, and LeBlanc, Jr., Crafting a Compiler, 1st Edition, Pearson, 2009, ISBN-13: 978-0-13-606705-4.

Course Learning Outcomes

1. Upon successful completion of this course, students should be able to:
   - i. Describe the compilation process and its various phases
   - ii. Design and develop a compiler according to a program specification
   - iii. Generate assembly code to run on a target machine
   - iv. Develop level of comfort using complexity terms and FSA (7);

V. Frame models in their mind that allows them to comprehend the limits of computation (9); and adapt computational complexity and P/NP as tools for software development (11).

2. Student outcomes:
   i. (1) An ability to apply knowledge of mathematics, science, and engineering.
   ii. (3) An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
   iii. Life-long Learning.
   iv. (5)An ability to identify, formulate and solve engineering problems.
   v. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
   vi. (15) An ability to apply design and development principles in the construction of software systems of varying complexity.

Instructor

Dr. Benjamin Sanders EdD, MS, Assistant Professor of CSDS Department
email: bsanders@calbaptist.edu
Physical Office: TEGR 335

Office hours:
TEGR 335, Tuesday: 8:15am – 11:45am, 1:15pm – 4:15pm.

- Send an email to Dr. Sanders 24 hours prior, if you intend to come to office hours. Otherwise, Dr. Sanders may be working remotely.

Course Meeting Times

MWF, 8:15am-9:15am, 9:30am-10:30am

Required Materials

Software: We will be using the Java programming language for this course. We do not support the use of IDE's that use AI to autofill code for programmers, as these are alternately utilized and not utilized in programming jobs in industry. Our goal is to empower you, a human, to become a programmer (and not just to become good at prompting an AI chat bot!). Therefore, we support the use of freeware such as Notepad++ and OpenJDK for the purpose of composing code and compiling/executing code.

https://notepad-plus-plus.org/

https://openjdk.org/

Dr. Sanders is happy to help any student who reaches out to him get these two pieces of software installed and working correctly during office hours. Note that if you have a Windows computer you will need to update the path in environment variables to point to the OpenJDK installation, once it is installed. The process for doing this is slightly different for every version of Windows, but Dr. Sanders has experience doing this on every version (back to Windows 95) and is happy to help if you reach out to him!

Technological Support

This course will be supported by Canvas. Go to https://calbaptist.instructure.com/ Grades will be posted on the Canvas website. Check in frequently for announcements, assignments, and discussions. All assignments must be submitted through Canvas. We cannot accept homework that is emailed to me! Course materials such as PowerPoint slides, assignments, etc. will be posted on Canvas. You are responsible for all material covered during lectures and assigned reading. Note: when you communicate with your instructor by email, put "CSCI 4150" in the subject line!

Homework assignments and projects

Students are allowed to have group discussions on requirements and algorithms of the problems in your assignments. **However, copying your classmate's (or anyone else's) work will be considered as academic dishonesty and a violation of the University's Honor Code. Any material that you use from another source must be clearly cited (indicate what material you are using and tell where it's from).** Homework assignments will be submitted via Canvas. Specific requirements for each assignment will be stated at that time.
Please pay attention to the submission requirements:

- unless specifically allowed, NO homework will be accepted in person or by email
- submit your assignment only in the format requested (do not submit zip files, multiple files or JPEG images, for example)
- be sure and submit your work on time.

No late work will be accepted!

Experience shows that students who fall behind are rarely successful in catching up and achieving the course objectives. Please turn your work in on time, as no late homework submissions will be accepted. The submission process in Canvas enforces deadlines; do not submit your assignments by email! **If you send me a late homework by email, requesting consideration, not only will you receive no credit for that assignment, but I may deduct five points from your overall grade for the course!**

Generative Artificial Intelligence (AI)

Generative AI (ChatGPT, Github Copilot, etc.) is a valuable set of tools within our industry and, as such, is something that students should become comfortable using in an ethical and responsible way. That said, there are certain scenarios and assignments that GenAI tools may or may not be allowed in this or any class. **The following table specifically lays out the GenAI policy for each assignment or assignment group in THIS CLASS ONLY**:

Assignment	GenAI Policy
Type I	GenAI chatbots and GenAI code completion tools (e.g., GitHub Co-Pilot, Coding Agents) are NOT permitted.
Type II	GenAI chatbots are discouraged, but not banned. The more you lean on chatbots to aid in your understanding of HW problems will likely result in poorer performance on exams.
Type III	GenAI chatbots and GenAI code completion tools (e.g., GitHub Co-Pilot, Coding Agents) are NOT permitted.

NOTE: If you feel there would be an appropriate use of AI on an assignment that is not permitted by the above policy, please **ask the instructor in writing, BEFORE utilizing AI in a different way, so the instructor can consider changing the policy; **if the instructor decides to change the policy, a modification will be provided in writing to the entire class**. Utilizing AI outside of the bounds of the above limitations or any written modifications from the instructor (to the entire class) will be considered an academic integrity violation.*

When permitted (see table above), the use of generative AI should be treated the same as collaboration with another student and, as such, whenever generative AI is consulted there should be acknowledgement of that input listed in a prominent location at the top of the first page of your assignment or in the comments at the top of your code.

As we, as a society, grapple with the ethical use of Generative AI, it is best to ask if its use is appropriate until more formalized standards are in place. Also, it is important for students to understand several things about generative AI:

1. It is often incorrect, and this may or may not improve over time. The code/answers recommended by a generative AI tool should ALWAYS be checked against authoritative sources (just like anything that comes from an external source).
2. Any code submitted to a generative AI site becomes PUBLIC DOMAIN. Students should NEVER willingly paste anything (code, documents, etc.) that is proprietary and subject to copyright.

In general, students are responsible for the work they submit. All final submissions should be a student's own work with proper credit given to all collaborators (whether the source is humans or a generative AI).

Finally, while the instructor may permit and/or encourage Generative AI tools for some assignments, the instructor also holds the right to ban Generative AI tools for other assignments (see table above). Thus, it is imperative that, while Generative AI tools can be an amazing tool for learning, the student is still expected to be able to demonstrate proficiency in all course material WITHOUT the use of Generative AI.

Syllabus Version A and B

In the first week of class, all validly enrolled students will have the opportunity to vote through Canvas on whether they would prefer Syllabus Version A or Syllabus Version B. Before the second week, Dr. Sanders will count all votes and therefore enact either Syllabus Version A or Syllabus Version B based on a simple majority vote. Dr. Sanders will post either the decision to enact Version A or Version B to Canvas as an announcement at the start of the second week, and show the decision to all students in attendance during lecture.

START OF SYLLABUS VERSION A

Attendance and Grading

Importantly, your final course grade will be no higher than your individual Attendance Percentage. Note that only class sessions in which you demonstrate engagement will count towards Attendance Percentage. Engagement entails not disrupting the instructor or other students during class time, arriving on-time as recorded by the instructor, staying focused on class material and any class-related material, and staying in-class for the duration of the class

session, including lecturing time and laboratory time. Note that arriving after the start of lecture or leaving early at the end of the class session will likely count as a Tardy, at the discretion of the instructor.

The instructor will keep a record of attendance during the class session, exhibiting the following categories: Engaged, Tardy, Absent, and Excused. Simply showing up on-time is not sufficient to achieve Engaged status, because a student may leave early, disrupt the instructor or other students, or otherwise not be engaged during class time. Any disqualifications from Engaged status for a student who is physically present will likely earn the student a Tardy status. In extreme tardiness, such as showing up within the last 5 minutes of lecture, the student will earn an Absent status despite being physically present. Note that Excused is not a replacement for Engaged, and Excused will not count towards the Attendance Percentage, regardless of the excuse*. The purpose of Excused is to allow a student to make up work with no penalty to the grading of that work. Examples of making up work include taking an exam at a later date or receiving an extension on individual homework assignments. Certain forms of assignments and assessments are not easily made up, despite a valid Excused status. At the instructor's discretion, these may or may not be made up for credit by the student. Examples of such difficult to make-up assignments include presentations in front of other classmates, assignments that require group work, assignments that require note-taking on a live lecture, and others. Students should not expect to receive opportunities to make up such assignments in general.

*Added 8/19/2025: Excused may count towards the Attendance Percentage if the student demonstrates a valid formal documentation, such as a doctor's note, to the instructor in a timely manner as described in the "Excused" section. Approval of an "Excused" counting towards the Attendance Percentage however is at the instructor's discretion.

Attendance Categories
Here are typical examples of the following categories:

Engaged
A student arrives on-time, listens attentively to the lecture, perhaps takes notes as needed, asks thoughtful, on-topic questions in a respectful way, participates with peers in group activities, demonstrates engagement with the assigned work when prompted by the instructor, focuses on his or her own assignment during laboratory times, and leaves the class once the scheduled class time is over, not before.

Tardy
A student arrives after the instructor has started speaking, utilizes an electronic device for browsing off-topic content, interrupts the instructor or other students, refuses to participate in group activities or is slack in doing so, does not demonstrate engagement with the assigned work when prompted by the instructor, refuses to engage with the assigned work during class time, or leaves the class prior to the end of the scheduled class session.

Absent
The student does not physically show up to the class session, or shows up within the last five minutes of class.

Excused
At least two business days prior to class, the student reaches out to the instructor to request an excused absence for an anticipated event. This may include travel, a scheduled medical appointment, or other events. An unexpected event may also qualify as an excused absence, such as a car crash or other emergency on the same day, prior to the lecture. In either event, the student will likely be expected to supply the instructor with formal documentation of the event within two business days of the lecture. Formal documentation demonstrates the claim of the student and the instructor's ability to contact any formal authority involved. For example, a doctor's note to be used as an excuse needs to express in writing that the doctor excuses the student for a duration of time that covers the lecture time period, and needs to exhibit the legible name, signature, address, and phone number of the doctor. The duration of excused time from such a note will be utilized to determine how much (if any) time will be granted to the student to make up missed assignments that are reasonable to make up with no penalty. Importantly, it is the student's responsibility to reach out to the instructor in a timely way if the student expects to make up assignments or assessments upon receiving an Excused status. For example, if a student contacts the instructor within two business days of the excused absence, this is likely deemed timely. If a student waits until the last week of the semester to reach out to the instructor, the student should likely expect to be denied the opportunity to make up the work.

END OF SYLLABUS VERSION B

Grades will be assigned on the following basis:
A 93-100% A- 90-92% B+ 87-89% B 83-86% B- 80-82%
C+ 77-79% C 73-76% C- 70-72% D+ 67-69% D 63-66% D- 60-62%
F below 60%

Some Key Points to Remember:

- On all assignments, you must submit your own work! To do otherwise is an Honor Code violation! Be very careful when sharing ideas; do not use anyone else's work!
- When communicating with me by email, you must put "**CSCI 4150**" in the subject line.
- To keep up with the material, read the relevant section of the textbook before each lecture.

CSDS Rules of conduct:

As college students and soon-to-be professionals, your conduct around your peers and your professor are expected to be polite, respectful and non-distracting. In particular, this means the following:

- No use of cell phones in class (for calls, texting, browsing, gaming, playing music or any other function) unless required for a classroom activity. Check with your instructor if you have any questions.
- No use of any computer for a non-class related purpose (taking notes is OK, working on homework, gaming or browsing is not)
- Earphones are not allowed during any class sessions.
- Do not record the lecture without permission.
- No talking or other behavior that might distract another student
- No treating another class member or the instructor with disrespect
- No submitting late work via email (or any other method) pleading for consideration

For each violation of any of the above guidelines, five points will be deducted from your overall grade for the course

Late assignments

- Late assignments **WILL NOT BE ACCEPTED**.
- Assignments are submitted via Canvas through any terminal that is connected to the Internet.
- Students are encouraged to submit assignments early; do not wait until the last possible moment to submit assignments.
- There are no acceptable excuses for the assignments being late.
- If a student decides to drop the course, it is their responsibility to do so by submitting a Drop Form to the registrar's office.

- The instructor cannot drop a student from a class.
- If the course is not properly dropped, the student will receive an "F" as the final grade.

Class Preparation

- Students are expected to prepare for each assignment prior to the class which presents the topic.
- There will be in class discussions and demonstrations.
  - Demonstrations are not the sole responsibility of the instructor, but from time to time individuals and teams will be required to demonstrate a technique.
- Plan to spend approximately six hours each week working on reading, reviewing, homework, and laboratory assignments to obtain a grade of "C" in this course.

Academic Dishonesty

- Academic dishonesty, as explained in the student handbook HONOR CODE policy, **WILL NOT BE TOLERATED**.
- Each student should become familiar with those offenses identified in the student handbook.
- A failing grade in the course will result from offenses identified as "cheating," especially the misrepresentation of assignments.
- ***All course work is the sole responsibility of the student***. Work performed by a student other than the name appearing on the assignment turned in, will be considered misrepresentation for **both** students for the assignment. At a minimum, a failing grade for the assignment and potentially the course will result from any incident of academic dishonesty.
- Students are expected to uphold the school's standard of conduct relating to academic honesty.
- Students assume full responsibility for the content and integrity of the academic work they submit. The guiding principle of academic integrity shall be that a student's submitted work, examinations, reports, and projects must be that of the student's own work.
- Students shall be guilty of violating the honor code if they:
  1. Represent the work of others as their own.
  2. Use or obtain unauthorized assistance in any academic work.
  3. Give unauthorized assistance to other students.
  4. Modify, without instructor approval, an examination, paper, record, or report for the purpose of obtaining additional credit.
  5. Misrepresent the content of submitted work.

- The penalty for violating the honor code is severe. Any student violating the honor code is subject to receive a failing grade for the course and will be reported to the Office of Student Affairs and Provost. If a student is

unclear about whether a particular situation may constitute an honor code violation, the student should meet with the instructor to discuss the situation.

It is permissible to assist classmates in general discussions of computing techniques. General advice and interaction is encouraged. Each person, however, must develop his or her own solutions to the assigned projects, assignments, and tasks. In other words, students may not "share solutions" on graded assignments. Such collaboration constitutes cheating. A student may not use or copy (by any means) another's work (or portions of it) and represent it as his / her own. If help on an assignment is needed, contact the instructor; do not seek solutions from other classmates.

Classroom Behavior

Any acts of classroom disruption that go beyond the normal rights of students to:

- question and discuss the instructor's educational process or outside relative subject content,
- ingress and egress the classroom on time, or
- conduct normal communication

will not be tolerated. (see Student Life Policy described in the Student Handbook).

Children in class

The University does not provide childcare for the dependents of students, faculty, or staff. Students are not permitted to be accompanied by children / dependents during class sessions. (NOTE THE CHILDCARE (BABY-SITTING) POLICY IN YOUR STUDENT HANDBOOK.)

APPEALS POLICY

To appeal a grade on an individual assignment, send e-mail to your instructor's e-mail address within two weeks of the grade having been received. Overdue appeals will not be considered. To appeal a final course grade, use the normal CBU appeals process.

INCOMPLETE POLICY

Students will not be given an incomplete grade in the course without sound reason and documented evidence as described in the Student Handbook. In any case, for a student to receive an incomplete, he or she must be passing and must have completed a significant portion of the course.

DISABILITIES POLICY

In compliance with the Americans with Disabilities Act (ADA), all qualified students enrolled in this course are entitled to "reasonable accommodations." Please notify the instructor during the first week of class of any accommodations needed for the course.

TUTOR ASSISTANCE

Tutors are available in the Office of Student Success in Lancer Arms #54.

SEXUAL HARASSMENT & TITLE IX POLICY

Review the Sex Discrimination, Sexual Violence & Sexual Harassment section of the Student Handbook. All offences will be reported.

Student Handbook: http://www.calbaptist.edu/explore-cbu/offices/office-registrar/academic-catalogs/undergraduate/
Academic Catalog: http://www.calbaptist.edu/explore-cbu/offices/office-registrar/academic-catalogs/undergraduate/
Calendar: https://insidecbu.calbaptist.edu/ICS/Academics/Academic_Calendars.jnz

ACADEMIC POLICIES AND PROCEDURES

The academic policies and procedures of California Baptist University are contained in the Academic Catalogs, available at http://catalog.calbaptist.edu/. Academic policies such as independent and directed study courses, academic probation and appeals, grade change, incomplete grades, student account policies and fees are documented in the current academic year catalog. Specific degree requirements depend on your "catalog year"; check with your advisor for more information. Be sure to refer to the "undergraduate" or "graduate" catalog as appropriate for you.

Recording Class Sessions

Recording of class sessions without the prior express written permission of the instructor is prohibited. Any permission granted shall include the requirements that a recording may only be used for content study purposes only and sharing a recording with anyone outside of the course and/or posting on social media are strictly prohibited. This includes any recordings that the instructor shares with students. This course policy is in alignment with Student Handbook and the Standard of Student Conduct. Refer to Student Handbook policies 15.6, 15.7, and 15.8 for more information.
